

Docker Cheat sheet

Category	Command	Description
Container Lifecycle	<code>docker run <image></code>	Run a container from an image
	<code>docker run -it <image> /bin/bash</code>	Run interactively with bash
	<code>docker ps</code>	List running containers
	<code>docker ps -a</code>	List all containers (including stopped)
	<code>docker stop <id></code>	Stop a running container
	<code>docker start <id></code>	Start a stopped container
	<code>docker restart <id></code>	Restart container
	<code>docker rm <id></code>	Remove container
	<code>docker logs <id></code>	View container logs
	<code>docker exec -it <id> /bin/bash</code>	Access a running container
Images	<code>docker images</code>	List all images
	<code>docker pull <image></code>	Download image from Docker Hub
	<code>docker rmi <id></code>	Remove image
	<code>docker build -t <name>:<tag> .</code>	Build image from Dockerfile
Volumes & Data	<code>docker volume ls</code>	List volumes
	<code>docker volume create <name></code>	Create a volume
	<code>docker run -v <volume>:<path> <image></code>	Mount volume to container
Networks	<code>docker network ls</code>	List networks
	<code>docker network create <name></code>	Create network
	<code>docker run --network=<name> <image></code>	Run container in network
Cleanup	<code>docker system prune</code>	Remove stopped containers, unused networks, dangling images
	<code>docker image prune</code>	Remove unused images
	<code>docker container prune</code>	Remove stopped containers

Category	Command	Description
	<code>docker volume prune</code>	Remove unused volumes
Docker Compose	<code>docker compose up</code>	Start services
	<code>docker compose up -d</code>	Start in detached mode
	<code>docker compose down</code>	Stop & remove services, networks, volumes
	<code>docker compose ps</code>	List services
	<code>docker compose logs -f</code>	Follow logs
